

THE PROFESSIONALS CHOICE

# BLIZZARD 1/1

## STATIONARY TERMINAL

- Foam washing, disinfecting and rinsing in one appliance •
  - Additional disinfectant metering valve •
- Concentration selection by the supervisor (valve can be sealed) •
  - 25% media savings •
- Automatic flushing of the terminalReliability •

# BLIZZARD 1/1 STATIONARY TERMINAL

Blizzard stationary terminal, so-called satellite, allows for the selection of the following functions: rinsing with water, foam washing and disinfection. Modern and compact design, appliance made entirely of stainless steel. Easy operation and maintenance guarantee long product life. All of the terminal fittings including the front part of the casing are permanently bolted to the base. Agents: cleaning and disinfection are placed beneath the satellite unit. Agent selection is made by means of a separate ball valve. The appropriate amount of the selected formulation is dosed by the injector with a special metering valve. Water under pressure of 16 to 25 bar is fed to a satellite unit from KS-type pumping station, and compressed air is supplied from the customer system. The special design of the internal fittings saves water during the washing process (rinsing lance is needed in order to obtain adequate water pressure).

The Blizzard terminal accessories:

- 220 mm foam lance
- 220 mm water lance
- 25 m hose with lance connection
- Hanger for hose and nozzles
- Hanger for canister
- Automatic hose reel (optional)

## UNIT SPECIFICATION:

WATER CONSUMPTION DURING RINSING	25 litres /min
WATER DISCHARGE DURING FOAMING	8 - 10 litres/min
MAXIMUM WATER TEMPERATURE	60°C
WATER PRESSURE	18 - 25 bar
AIR FLOW	200 litres /min
MAXIMUM AIR PRESSURE	8 bar
NOMINAL AIR PRESSURE	5 bar
CHEMICAL AGENTS CONCENTRATIONS ADJUSTMENT RANGE	0 – 8%
APPLIANCE DIMENSIONS	530x390x80 mm
APPLIANCE WEIGHT	5,11 kg
