MULTISYSTEM

STATIONARY TERMINAL

- Innovative dispensing of two chemical agents at the same time •
- Reduced washing time and water consumption •
- Modern and compact housing (stainless steel) •
 - Easy operation and maintenance •
 - Long product life •

MULTISYSTEM STATIONARY TERMINAL

Stationary terminal is designed for using two agents during one washing/disinfection operation. Special design allows for accurate dispensing two products at the same time. This dispensing solution ensures reduced washing time and water consumption resulting from skipping one rinsing process.

Device features include: rinsing with water, foam washing/disinfection. Modern and compact design, appliance made entirely of stainless steel. Easy operation and maintenance guarantee long product life. All device fittings are located inside the housing permanently fixed to the base.

Washing and disinfecting agents are placed beneath the satellite unit. An appropriate dose of each agent is dispensed by so called injector fitted with a special dispensing valve. Water passing through the satellite unit produces vacuum that sucks the dispensed preparations. Water under pressure of 16 to 25 bars is fed to a satellite unit from the KS-type pumping station, and compressed air is supplied from the customer's system. A special construction of the internal fittings allows for reduced water consumption during washing and rinsing processes. The applied design solutions require the operator to use appropriate attachments recommended for each washing phase.

Terminal Multisystem attachments include:

- 250 mm foam lance
- 250 mm water lance
- 25 m hose with lance connection
- Hanger for hose and lances
- Hanger for canister

UNIT SPECIFICATION:

WATER CONSUMPTION DURING RINSING	25 litres /min
WATER DISCHARGE DURING FOAMING	14 - 16 litres/min
MAXIMUM WATER TEMPERATURE	60°C
WATER PRESSURE	18 - 25 bar
AIR FLOW	200 litres /min
MAXIMUM AIR PRESSURE	8 bar
NOMINAL AIR PRESSURE	5 bar
CHEMICAL AGENTS CONCENTRATIONS ADJUSTMENT RANGE	0 – 8%
